Department of Computer Engineering

Aim:- To develop a responsive photo gallery using CSS Grid, hover effects, and JavaScript.

Objective: To design a responsive gallery layout using CSS Grid, implement hover effects for enhanced user interaction, and use JavaScript to add dynamic features such as image preview, filtering, or navigation.

Theory:

A responsive photo gallery is an important component of modern web design that allows images to be displayed in an organized and visually appealing manner across different devices. CSS Grid is a powerful layout system that enables developers to create flexible and structured gallery layouts with rows and columns. It automatically adjusts the placement and size of images based on screen size, ensuring responsiveness and consistency.

Hover effects using CSS enhance user interaction by providing visual feedback when users interact with images, such as zooming, fading, or highlighting. JavaScript is used to add dynamic functionalities like image preview in a modal, filtering images based on categories, and navigation through images. By combining CSS Grid, hover effects, and JavaScript, developers can create interactive and responsive photo galleries that improve user experience.

Implementation:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Experiment 4 - Photo Gallery</title>

  <style>

    * { box-sizing: border-box; }

    body { margin: 0; font-family: Arial, sans-serif; background: #0f172a; color: #e2e8f0; }
```

```
    .wrap { width: min(980px, 94vw); margin: 24px auto; }

    h1 { margin: 0 0 8px; }

    .filters { display: flex; gap: 8px; flex-wrap: wrap; margin: 12px 0 16px; }

    .filters button { border: 0; padding: 9px 12px; border-radius: 8px; cursor: pointer;
background: #334155; color: #fff; }

    .filters .active { background: #0ea5e9; color: #082f49; }

    .grid { display: grid; grid-template-columns: repeat(auto-fit, minmax(190px, 1fr)); gap:
12px; }

    .card { position: relative; border-radius: 12px; overflow: hidden; cursor: pointer; }

    .card img { width: 100%; height: 180px; object-fit: cover; display: block; transition:
transform .25s; }

    .card:hover img { transform: scale(1.06); }

    .label { position: absolute; left: 0; right: 0; bottom: 0; padding: 10px; background: linear-
gradient(transparent, rgba(0,0,0,.75)); }

    .hide { display: none; }

    .viewer { position: fixed; inset: 0; background: rgba(2,6,23,.9); display: none; place-
items: center; padding: 16px; }

    .viewer.open { display: grid; }

    .viewer img { width: min(860px, 92vw); max-height: 78vh; border-radius: 12px; object-
fit: cover; }

    .close { position: fixed; top: 14px; right: 14px; border: 0; width: 42px; height: 42px;
border-radius: 999px; cursor: pointer; font-size: 26px; }

  </style>

</head>

<body>

  <div class="wrap">

    <h1>Responsive Photo Gallery</h1>

    <p>CSS Grid + Hover + JavaScript Filter/Preview</p>
```

```
  <div class="filters">

    <button class="active" data-filter="all">All</button>

    <button data-filter="nature">Nature</button>

    <button data-filter="city">City</button>

    <button data-filter="travel">Travel</button>

  </div>

  <div class="grid" id="grid">

    <div class="card" data-cat="nature"><img src="https://images.unsplash.com/photo-

class="label">Beach</div></div>

    <div class="card" data-cat="nature"><img src="https://images.unsplash.com/photo-
1511497584788-876760111969?auto=format&fit=crop&w=900&q=80" alt="Forest"><div
class="label">Forest</div></div>

  </div>

</div>

<div class="viewer" id="viewer" aria-hidden="true">

  <button class="close" id="closeBtn">&times;</button>

  <img id="bigImg" alt="Preview">

</div>

<script>

  const btns = document.querySelectorAll('.filters button');
```

```
  const cards = document.querySelectorAll('.card');
  const viewer = document.getElementById('viewer');
  const bigImg = document.getElementById('bigImg');

  btns.forEach(b => b.onclick = () => {
    btns.forEach(x => x.classList.remove('active'));
    b.classList.add('active');
    const f = b.dataset.filter;
    cards.forEach(c => c.classList.toggle('hide', !(f === 'all' || c.dataset.cat === f)));
  });

  cards.forEach(c => c.onclick = () => {
    bigImg.src = c.querySelector('img').src;
    viewer.classList.add('open');
    viewer.setAttribute('aria-hidden', 'false');
  });

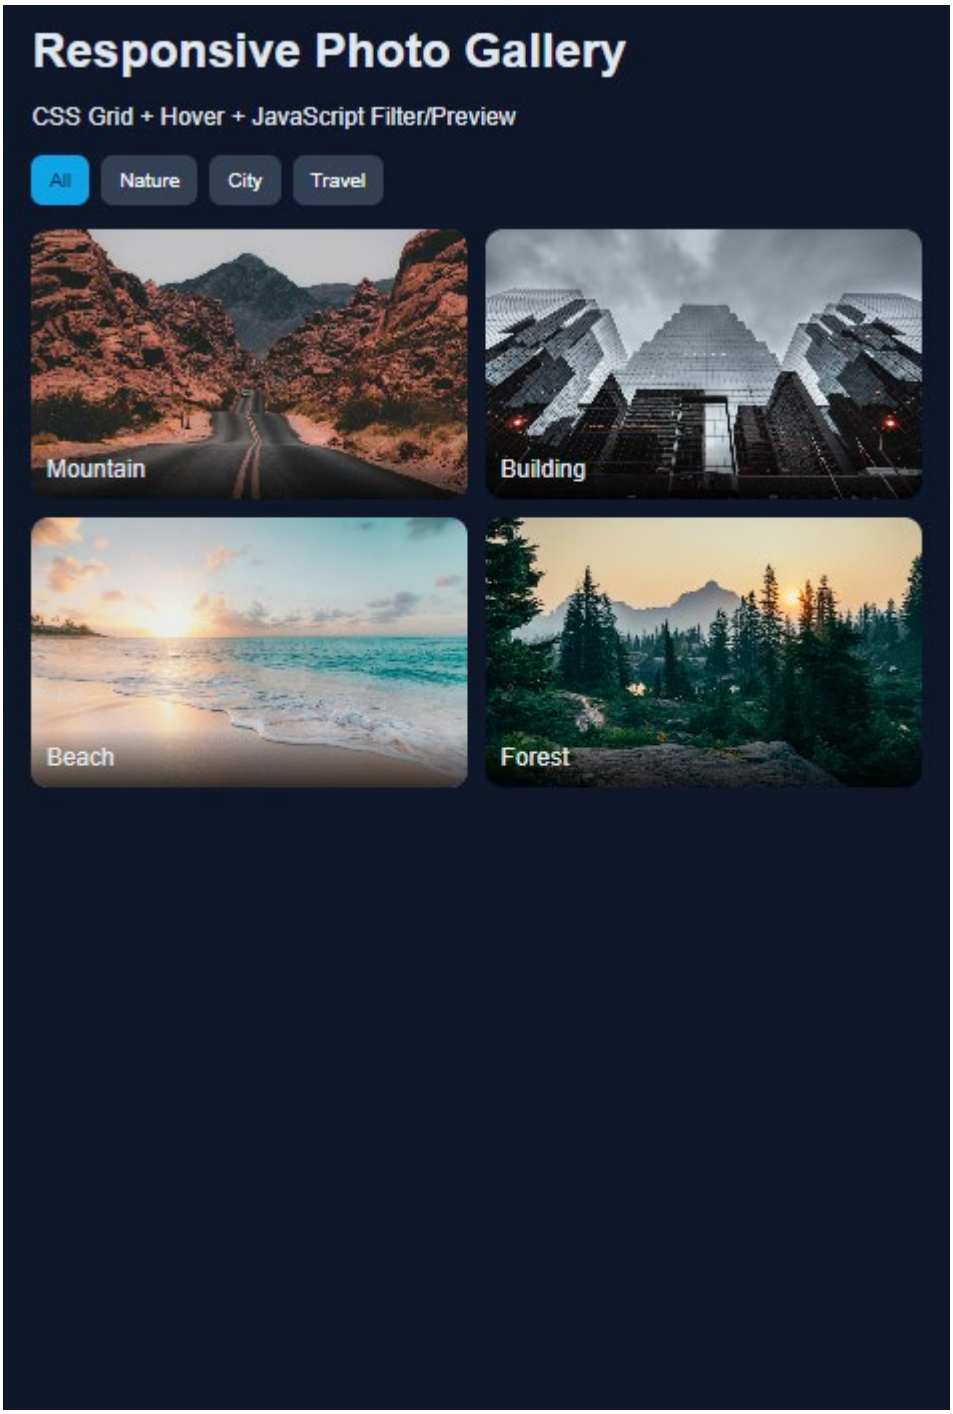
  function closeViewer() {
    viewer.classList.remove('open');
    viewer.setAttribute('aria-hidden', 'true');
  }

  document.getElementById('closeBtn').onclick = closeViewer;
  viewer.onclick = e => { if (e.target === viewer) closeViewer(); };
  document.onkeydown = e => { if (e.key === 'Escape') closeViewer(); };
</script>
```

</body>

</html>

Output:



Conclusion:

Designing a responsive gallery using **CSS Grid** ensures a flexible and well-structured layout that adapts to different screen sizes. **Hover effects** enhance user interaction by making the gallery more engaging and visually appealing. With the help of **JavaScript**, dynamic features like image preview, filtering, and navigation improve functionality and user experience. Overall, this approach results in a modern, interactive, and mobile-friendly photo gallery
